Student's Weekly Report of Internship

Student Name:	PATEL ANKIT VINAYBHAI		
Enrollment Number:	201260107012		
Name Of Organization:	State Cyber Cell-CID		
External Guide Name:	Mr. Nikhil Prajapati		
External Guide Contact details:	Email:	nik02907@gmail.com	Mob No: 9825073823
Internal Faculty Guide Name:	Prof. Krupa Suthar		

Work done in last Week with description :

Week 1 (Date : 1st February 2024 to 8th February 2024) :

- 1) Basic Knowlegde About Cyber Security.
- 2) Frauds made in India

Plans for next week:

- 1) Basic Knowlegde About work done by CID.
- 2) Basic knowledge of anti bulling unit.

Task

➤ **Basic knowledge of cyber security**

Confidentiality: Ensuring that data is only accessible to those who are authorized to view it. This often involves encryption and access controls.

Integrity: Ensuring that data is accurate and hasn't been altered by unauthorized parties. This can involve techniques like checksums and digital signatures.

Availability: Ensuring that systems and data are available when needed and resistant to denial-of-service attacks or other disruptions.

Authentication: Verifying the identity of users or systems. Common methods include passwords, biometrics, and multi-factor authentication.

Authorization: Determining what actions users or systems are allowed to perform once they've been authenticated. This involves setting permissions and access controls.

Firewalls: Software or hardware devices that monitor and control incoming and outgoing network traffic based on predetermined security rules.

Antivirus/Antimalware: Software designed to detect, prevent, and remove malicious software (malware) such as viruses, worms, and trojans.

Patch Management: Keeping software and systems up-to-date with the latest security patches and updates to mitigate known vulnerabilities.

Encryption: The process of encoding data so that only authorized parties can access it. This is crucial for protecting data both in transit and at rest.

Security Policies: Formalized rules and guidelines that govern an organization's approach to cybersecurity, including acceptable use policies, incident response plans, and disaster recovery procedures.

Security Awareness Training: Educating users about common cybersecurity threats and best practices to help them recognize and avoid potential risks.

➤ **Frauds made in India**

1. Financial Fraud:

- **Investment Schemes:** Fraudulent investment schemes are prevalent in India, promising high returns with little to no risk. These schemes often target unsuspecting investors, promising quick wealth but end up being Ponzi schemes where early investors are paid returns from the investments of new investors rather than from profits.
- **Banking and Credit Card Fraud:** This involves unauthorized access to bank accounts or credit cards, often through techniques like phishing, skimming, or hacking. Fraudsters may steal personal information to make unauthorized transactions or create fake credit cards.
- **Identity Theft:** Identity theft occurs when someone uses another person's personal information without their permission to commit fraud or other crimes. This can lead to financial losses for the victim as the thief may open credit accounts, apply for loans, or make purchases in the victim's name.

2. Cyber Fraud:

- **Phishing:** Phishing attacks involve tricking individuals into providing sensitive information such as passwords, credit card numbers, or personal identification by posing as a legitimate entity via email, text message, or phone call.
- **Ransomware:** Ransomware is a type of malware that encrypts a victim's files and demands payment (usually in cryptocurrency) for their release. Victims may be individuals or organizations, and the attackers often threaten to leak sensitive data if the ransom is not paid.
- **Hacking:** Hackers may gain unauthorized access to computer systems or networks to steal data, disrupt operations, or cause damage. This could include breaching government databases, corporate networks, or personal devices.

3. Insurance Fraud:

- **False Claims:** Individuals may file false insurance claims for accidents, injuries, or damages that never occurred, or exaggerate the extent of losses to receive higher payouts.
- **Medical Insurance Fraud:** Healthcare providers may bill insurance companies for services or procedures that were not provided, or patients may submit false claims for medical treatments they did not receive.

4. Real Estate Fraud:

- **Forgery:** Real estate fraud often involves forging documents such as property deeds, sale agreements, or rental contracts to illegally transfer ownership or possession of property.
- **Land Grabbing:** Land grabbing refers to the illegal seizure of land, often through coercion, intimidation, or fraudulent means. The perpetrators may then sell or develop the land for personal gain.

5. Job and Recruitment Fraud:

- Fake Job Offers: Scammers may lure job seekers with fake job offers that require payment for placement services, training materials, or background checks. These jobs often do not exist, and victims end up losing money without any employment prospects.
- Counterfeit Products:
 - Fake Branded Goods: Counterfeiters produce and sell fake versions of branded products such as clothing, accessories, electronics, and pharmaceuticals. These products are often of inferior quality and may pose health and safety risks to consumers.
- 6. Corruption and Bribery:
 - Bribery: Bribery involves offering, giving, receiving, or soliciting something of value (such as money, gifts, or favors) to influence the actions of a public official or private individual for personal gain. Corruption undermines the integrity of institutions and erodes public trust.

➤ Protection agents crime

1. Government and Law Enforcement:

- Legislation and Regulation: Implement and enforce laws and regulations to address different types of fraud, such as the Information Technology Act, Banking Regulations, Consumer Protection Act, and Anti-Corruption Laws.
- Specialized Units: Establish specialized units within law enforcement agencies, such as cybercrime cells, economic offenses wings, and anti-corruption bureaus, to investigate and prosecute fraud cases effectively.
- Collaboration: Foster collaboration and information-sharing among different law enforcement agencies, regulatory bodies, and government departments to combat organized crime syndicates and financial fraud networks.
- Training and Capacity Building: Provide ongoing training and capacity-building programs for law enforcement personnel to equip them with the knowledge and skills necessary to investigate and prevent various types of fraud.

2. Financial Institutions and Regulatory Bodies:

- Security Measures: Implement robust security measures, such as multi-factor authentication, encryption, and fraud detection systems, to protect customers' financial transactions and data.
- Customer Education: Educate customers about common types of financial fraud, warning signs, and preventive measures through awareness campaigns, newsletters, and online resources.
- Compliance and Monitoring: Ensure compliance with regulatory requirements and conduct regular audits and monitoring to detect and prevent fraudulent activities within financial institutions.

3. Technology Companies and Internet Service Providers:

- Security Updates: Develop and release regular security updates and patches for software, applications, and devices to address vulnerabilities and protect users from cyber threats.
- Anti-Phishing Measures: Implement anti-phishing measures, such as email authentication protocols (SPF, DKIM, DMARC) and spam filters, to prevent phishing attacks and protect users from fraudulent emails.
- User Education: Educate users about safe online practices, such as avoiding clicking on suspicious links or downloading attachments from unknown sources, to reduce the risk of falling victim to cyber fraud.

4. Educational Institutions and NGOs:

- Awareness Programs: Organize workshops, seminars, and awareness campaigns in schools, colleges, and community centers to educate people about various types of fraud and how to protect themselves from becoming victims.
- Skill Development: Provide training and skill development programs, particularly in rural and underserved areas, to empower individuals with the knowledge and skills needed to recognize and report fraudulent activities.

5. Public Participation and Vigilance:

- Reporting: Encourage people to report suspected fraud incidents to the relevant authorities, such as the police, consumer forums, or regulatory bodies, to initiate investigations and take necessary action.
- Vigilance Groups: Establish community-based vigilance groups or neighborhood watch programs to monitor and report suspicious activities, such as land grabbing or job scams, to local authorities.

Total Working Hrs: —~~25 Hours~~—

Signature of Student:

The above entries are correct and the grading of work done by Trainee is

Excellent	Very Good	Good	Fair	Below Average	Poor

Signature of External Guide with Company Seal:

Signature of Internal Guide
