Student's Weekly Report of Internship

Student Name:	PATEL ANKIT VINAYBHAI		
Enrollment Number:	201260107012		
Name Of Organization:	State Cyber Cell-CID		
External Guide Name:	Mr. Nikhil Prajapati		
External Guide Contact details:	Email:	nik02907@gmail.com	Mob No: 9825073823
Internal Faculty Guide Name:	Prof. Krupa Suthar		

Work done in last Week with description :

Week 12 (Date : 23th April 2024 to 30th April 2024) :

- 1) Flare vm

Task

➤ **Flare vm**

- FLARE VM (FireEye Labs Advanced Reverse Engineering) is a Windows-based virtual machine environment developed by FireEye's FLARE team for malware analysis, reverse engineering, and threat research. FLARE VM provides a pre-configured environment with a curated set of tools and utilities specifically tailored for analyzing Windows-based malware samples and conducting reverse engineering tasks. Here's a detailed explanation of FLARE VM:
- Purpose:
- FLARE VM is designed to streamline the process of malware analysis and reverse engineering on Windows-based systems. It provides a pre-configured Windows environment with a comprehensive toolkit of open-source and free tools for analyzing malicious software, identifying malware behaviors, and understanding cyber threats targeting the Windows platform.
- Key Features:
- Curated Toolset: FLARE VM includes a curated collection of tools and utilities specifically selected for malware analysis, reverse engineering, and threat research tasks. These tools cover various aspects of malware analysis, including static analysis, dynamic analysis, memory forensics, network forensics, code analysis, and behavioral analysis.
- Pre-configured Environment: FLARE VM provides a pre-configured Windows environment with all the necessary tools, libraries, and dependencies pre-installed. This eliminates the need for users to manually install and configure individual tools, allowing them to focus on analysis tasks.
- Ease of Use: FLARE VM is designed to be user-friendly and accessible to both novice and experienced analysts. It provides a user-friendly interface and intuitive navigation, making it easy for users to locate and utilize the tools they need for their analysis tasks.
- Integration with FireEye Products: FLARE VM integrates with other FireEye products and services, such as FireEye Endpoint Security (formerly known as Mandiant Endpoint Security), to provide enhanced capabilities for malware detection, analysis, and response. It leverages threat intelligence feeds, signature databases, and behavioral analytics to enhance malware analysis workflows and improve detection and remediation efforts.
- Regular Updates: FLARE VM is regularly updated with the latest versions of tools and utilities, as well as new features, enhancements, and bug fixes. Updates are provided through the FLARE VM repository, allowing users to easily install and update tools using package managers such as Chocolatey and Scoop.
- Customization: FLARE VM is highly customizable, allowing users to tailor the analysis environment to their specific needs and requirements. Users can add or remove tools, configure analysis workflows, and customize settings to suit their preferences.

- Community Support: FLARE VM has a strong community of cybersecurity professionals, malware analysts, and reverse engineers who contribute to its development, maintenance, and enhancement. The FLARE VM community provides support, documentation, tutorials, and resources to help users make the most of the platform and its tools.
- Tool Categories:
- FLARE VM includes tools and utilities across various categories, including:
- Disassemblers and Debuggers: IDA Pro, Ghidra, x64dbg
- Memory Forensics: Volatility, Rekall
- Network Forensics: Wireshark, CapTipper
- Static Analysis: PEiD, YARA
- Dynamic Analysis: Cuckoo Sandbox, Hybrid Analysis
- File Analysis: PESTudio, Process Explorer
- Behavior Analysis: ProcMon, RegShot

Total Working Hrs: —25 Hours—

Signature of Student:

The above entries are correct and the grading of work done by Trainee is

Excellent	Very Good	Good	Fair	Below Average	Poor
